Product Requirements & Specification Document

Project Name

FinSight - Personal Finance Dashboard

Description

FinSight is a modern, open-source personal finance dashboard for entrepreneurs and individuals. It visualizes spending, budgets, and financial goals using interactive charts and summaries. Built with React, advanced CSS (Flexbox, Grid), and Tailwind, it delivers a responsive, dynamic user experience.

---

1. Objectives

- Provide users with clear, actionable insights into their finances.
- Enable easy tracking of spending, budgets, and goals.
- Offer an intuitive, responsive, and visually appealing interface.
- Encourage open-source contributions and extensibility.

---

2. Core Features

Feature	Description
Dashboard Overview	Summary of total balance, spending, budgets, and goals.
Spending Visualization	Interactive charts (bar, pie) showing spending by category and over time.
Budget Tracking	Set, view, and monitor budgets per category.
Financial Goals	Create, track, and visualize progress toward financial goals.
Transaction List	Dynamic, filterable list of recent transactions.
Responsive Design	Fully responsive layout using Flexbox, Grid, and Tailwind CSS.
Data Import/Export	Import/export data in CSV/JSON format.
Open-Source Ready	Modular codebase, clear documentation, and contribution guidelines.

---

3. User Stories

As a…	I want to…	So that I can…
User	View my spending and budgets at a glance	Understand my financial health
User	Set and track financial goals	Stay motivated and monitor progress
User	Filter transactions by date/category	Analyze my spending patterns
Contributor	Easily extend or modify components	Contribute to the open-source project

4. Technical Specifications

4.1 Architecture

- **Frontend:** React (functional components, hooks)
- **Styling:** Tailwind CSS, Flexbox, CSS Grid
- **Data Handling:** Local state (Context/Redux optional), mock API/data files
- **Charts:** Chart.js or Recharts (open-source)
- **Testing:** Jest, React Testing Library

4.2 Component Structure

```
/src
  /components
    DashboardOverview.jsx
    SpendingChart.jsx
    BudgetTracker.jsx
    GoalsPanel.jsx
    TransactionList.jsx
    ImportExport.jsx
  /data
    mockData.json
  /styles
    tailwind.config.js
```

4.3 Data Model (Example)

```
{
  transactions: [
    { id, date, amount, category, description }
  ],
  budgets: [
    { category, limit, spent }
  ],
  goals: [
    { id, name, targetAmount, currentAmount, deadline }
  ]
}
```

5. UI/UX Requirements

Requirement	Specification
Layout	Responsive, grid-based, mobile-first
Theme	Modern, clean, accessible (WCAG 2.1 AA)
Interactivity	Real-time updates, smooth transitions, hover/click effects
Customization	User can select categories, set budgets/goals

Accessibility	Keyboard navigation, ARIA labels, color contrast

---

6. Non-Functional Requirements

Category	Specification
Performance	Initial load < 2s, smooth chart rendering
Security	No sensitive data stored; local only
Documentation	README, code comments, contribution guide
Extensibility	Modular components, clear API/data interfaces

---

7. Milestones & Deliverables

Milestone	Deliverable
UI Prototype	Static React components, Tailwind styling
Data Integration	Dynamic rendering with mock data
Chart Implementation	Interactive spending/budget/goal charts
Import/Export Feature	CSV/JSON import/export functionality
Documentation	README, contribution guidelines
Final Release	Complete, tested, open-source dashboard

---

8. Acceptance Criteria

- All core features implemented and tested
- Responsive and accessible UI
- Accurate, real-time data visualization
- Clear documentation and open-source readiness

---

9. Out of Scope

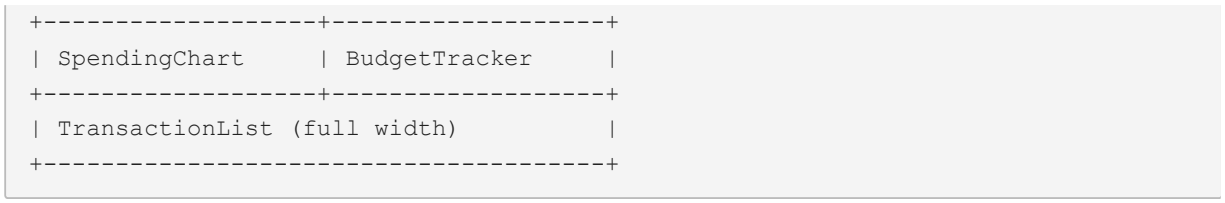

- User authentication
- Real bank integrations
- Backend/server-side logic

---

10. Appendix

Example Dashboard Layout

```
+-------------------+-------------------+
| DashboardOverview | GoalsPanel        |
```
